

ABSTRACT OF THE DISCLOSURE

A method and an apparatus for manufacturing an image displaying apparatus having a display panel are provided. A first substrate of the display panel on 5 which phosphor exciting means is disposed and a second substrate of the display panel on which phosphors emitting light by the phosphor exciting means is provide are prepared under the vacuum atmosphere. Then, the first and the second substrates are carried 10 in a getter processing chamber or bake processing chamber, and getter processing or bake processing is applied thereto under the vacuum atmosphere. After the processing, the first and the second substrates are carried in a seal processing chamber, where the 15 substrates are heat sealed under the vacuum atmosphere. Thus, reduction of vacuum exhaust time and a high vacuum degree in manufacturing an image displaying apparatus is attained and efficiency of manufacturing is improved.
